

Jason Asariah

Irvine, CA | (951) - 594 -1013 | JasonSean.Asariah@calbaptist.edu | [linkedin.com/in/JasonAsariah](https://www.linkedin.com/in/JasonAsariah)

EDUCATION

California Baptist University, Riverside, CA

Bachelor of Science in Electrical and Computer Engineering (ABET Accredited) - GPA 4.0
Minor in Computer Science

Expected: April 2027

Troesh Family Foundation Scholarship
Presidents List

2024-Present
Fall 2023 – Present

TECHNICAL SKILLS

Programming Languages: Python, Java, C++/C, Verilog, Arduino C

Engineering Design and Developer Tools: VS Code, PyCharm, IntelliJ, Arduino IDE, PlatformIO, GitHub, Fusion 360 Modeling/Electronics, Cura, Easy EDA, Vivado, MATLAB, Excel, AutoCAD, Jira, Altium, LabVIEW, Linux, TortoiseSVN, Xpedition Designer, Xpedition Layout

Equipment: Soldering Iron, Drill Press, Solder Reflow Oven, 3D Printers, Oscilloscope, Digital Multimeter (DMM), NI DAQs

ELECTRICAL ENGINEERING AND COMPUTER SCIENCE EXPERIENCE

SpaceX, Hawthorne, CA

May 2025 – August 2025

Electrical Engineering Intern | Xpedition Designer, Xpedition Layout, LTspice, NX, Excel, DMM, Oscilloscope

- Designed the first rev of flight PCB schematics for 4 Starshield PCBs with high speed parallel LVDS, SPI/I²C, flash memory, precision references, and power sequencing.
- Partnered with thermal and mechanical teams on board partitioning, component placement, connectors, and high-speed harness selection.
- Drove boards through layout, fabrication, assembly, and bring-up, coordinating with layout, supply chain, manufacturers, and vendors.
- Designed and laid out 2 test coupon PCBs to validate the boards and supported radiation testing to validate designs ahead of flight hardware.
- Validated board functionality, including power, high-speed interfaces, interconnects, and digital communications.

SpaceX, Hawthorne, CA

May 2025 – August 2025

Electrical Engineering Intern | Altium, NX, Excel, DMM, Oscilloscope, NI DAQs, Jira, TortoiseSVN

- Rapid design of flight harnesses for Dragon capsule for various sensors and heaters in constrained locations while coordinating with integration, structures, thermal, supply chain, materials, and harness/heater manufacturing teams for an end-to-end solution
- Developed power analysis tool to analyze load balancing across Dragon avionics system
- Drove qualification campaign for first time flown sensor and harness, ensuring flight readiness of design
- Designed schematic for interface PCB (IsoSPI, SPI, USB) to collect data and simulate environments for new flight hardware

Bourns Inc., Riverside, CA

May 2024 – May 2025

Engineering Intern | EasyEDA, Drill Press, Solder Reflow Oven, Excel, DMM

- Enhanced thermal protection product's accuracy by 20% by identifying design flaws and redesigning the device
- Designed PCBs and manufacture test housings for overvoltage protection devices, enabling small-scale thermal testing to validate product performance under high temperature conditions

California Baptist University, Riverside CA

Summer of 2022-2024

Biomedical Engineering Research Intern | Arduino, Fusion 360, C/C++, DMM

- Model passive exoskeleton for motor rehabilitation; research EMG stimulation as a means of patient input to rehabilitation devices; continued quadrupedal robot research with CBU faculty

Personal Project

Quadrupedal Robotics Researcher | Arduino IDE, PlatformIO, VS Code, Fusion 360, 3D Printing, DMM

May 2020 - Present

- Designing third iteration of quadrupedal robot prototype that has dynamic balancing
- Design both electronic and mechanical systems, optimized programing with object-oriented approaches

LEADERSHIP EXPERIENCE

California Baptist University Robotics Team, Riverside, CA

September 2023, January 2024 - Present

Senior Electronics Lead and Vice President | Oscilloscope, C/C++, DMM, VS Code, Fusion 360 Electronics, Linux

- Assist team president in leading 30 person team while leading a subteam of 8 to 12 students to build an electronics system with various sensor systems and communication protocols (RS485, I2C, UART, USB, etc.) for VEX-U robotics competition

- Engineer PCBs and circuits from prototype to working products for microcontrollers and sensor data acquisition systems
- Develop and troubleshoot software/firmware for microcontrollers and Linux systems using debugging techniques and troubleshoot hardware using various circuit analysis tools
- Team advanced to world championship in 2023-24 and 2024-25 seasons

California Baptist University, Riverside, CA

January 2025 - Present

EGR182 (Intro Math Engineering Application) Lab Instructor

- Lecture on basic engineering and math concepts including: Ohm's Law, Law of Sin and Cosine, and Complex Numbers
- Supervise lab and help students take basic measurements with oscilloscopes, DMMs, and theodolites

California Baptist University, Science Technology Education Partnership (STEP)

September 2022 –December 2024

STEM Mentoring and Coaching

- Aided in leading high school STEM summer camps, guide students to design solutions for real world problems
- Lead LEGO summer camps and coach First LEGO League teams
